

THE TRIED AND TESTED DESKTOP UNIT

THE PERIOTEST CLASSIC

THE CONVENIENT TABLE-TOP UNIT

The Periotest classic offers intelligent, user-friendly design and is equally suitable for implantology practices and for periodontologists, orthodontic surgeons, oral and maxillofacial surgeons and dentists who set the highest standards.

The super-slim handpiece is easy to grip and to position. The Periotest classic features a large illuminated display, on which the measuring results are shown as whole numbers (= Periotest values). Simultaneous audible output of the measurements means that the dentist does not have to turn away from the patient. The measurements are also audible for the patient, so both dentist and patient are able to monitor the success of the treatment. The menu offers a choice of four languages (German, English, French and Spanish).

The Periotest classic comes with rechargeable NiCd batteries for cordless operation. The battery level indicator tells you how much charge they have left. A battery charger is also supplied with the unit.
